Custom Header Test

This slide has a custom header with:

- Size: 1.5em (instead of default 1.2em)
- Weight: bold (instead of default medium)

The footer also has custom settings:

- Size: 1.0em (instead of default 0.8em)
- Weight: medium (instead of default regular)

Font Verification

If the configuration works correctly, you should see:

In the header:
- Larger text (1.5em vs 1.2em)
- Bolder weight

In the footer:
- Larger text (1.0em vs 0.8em)
- Medium weight

On the title slide:
- Much larger title (2.0em vs 1.3em)
- Bold title weight
- Larger subtitle (1.2em vs 0.9em)

This focus slide should be 2.0em and bold

Expected Results

We can verify these settings using:

```
pdffonts config-test.pdf
mutool info config-test.pdf
```

This will show:
- Font names (should be Fira Sans variants)
- Font sizes
- Whether bold/medium variants are used
